CONTENTS OF VOLUME 131

NUMBER 1, MAY 1983

Review: Protein Blotting: Principles and Applications
Jonathan M. Gershoni and George E. Palade 1

An Improved Plaque Assay for Viruses Infecting Poikilothermic Cells; Use of Ultralow-Gelling-Temperature Agarose *John W. Ludlow and Vern D. Winston* 16

Interaction between Heparin and Human Pregnancy-Associated Plasma Protein A (PAPP-A): A Simple Purification Procedure
M. W. Davey, B. Teisner, M. Sinosich, and J. G. Grudzinskas 18

A New Procedure for the Synthesis of Polyethylene Glycol–Protein Adducts; Effects on Function, Receptor Recognition, and Clearance of Superoxide Dismutase, Lactoferrin, and α_2-Macroglobulin *Charles O. Beauchamp, Steven L. Gonias, David P. Menapace, and Salvatore V. Pizzo* 25

Amperometric Response to Carbon Monoxide by a Clark-Type Oxygen Electrode
Ted C. Kuchnicki and Norman E. R. Campbell 34

Quantitative Analysis of Formate in Solutions Containing Phosphate
George Henry Fynn and Timothy Neville Whitmore 42

Silver Staining of High Molecular Weight Proteins on Large-Pore Polyacrylamide Gels
B. A. Perret, R. Felix, M. Furlan, and E. A. Beck 46

A Method for Predicting the Location of Particles Sedimenting in Sucrose Gradients
William Hirst and Robert A. Cox 51

Microquantitative Determination of P_i–ATP and ADP–ATP Exchange Kinetics Using Thin-Layer Chromatography on Silica Gel
Gennadiy E. Bronnikov and Stanislav D. Zakharov 69

Rapid Determination of [*guanidino*-^{15}N]Arginine in Plasma with Gas Chromatography–Mass Spectrometry: Application to Human Metabolic Studies
Itzhak Nissim, Marc Yudkoff, Thomas Terwilliger, and Stanton Segal 75

Determination of δ-Aminolevulinate Dehydratase Activity by a Specific Fluorometric Coupled-Enzyme Assay *Philip F. Giampietro and Robert J. Desnick* 83

Microbial Fermentative Preparation of L-[$^{15}N_2$]Lysine and Its Tracer: Application to Serum Amino Acid Kinetic Studies *Charles S. Irving, Charles L. Cooney, Laura T. Brown, Daniel Gold, Jennifer Gordon, and Peter D. Klein* 93

Reverse-Phase High-Performance Liquid Chromatography of Hydrophobic Proteins and Fragments Thereof *George E. Tarr and John W. Crabb* 99

Denaturant-Gradient Chromatography for the Study of Protein Denaturation: Principle and Procedure *Shigeru Endo, Yoshio Saito, and Akiyoshi Wada* 108

A Fluorometric Procedure for Measuring the Neuraminidase Activity: Its Application to the Determination of This Activity in Influenza and Parainfluenza Viruses
José A. Cabezas, Angel Reglero, and Claude Hannoun 121

Sodium Dodecyl Sulfate-Mediated Transfer of Electrophoretically Separated DNA-Binding Proteins
A. M. Aubertin, L. Tondre, C. Lopez, G. Obert, and A. Kirn 127

Analysis of 5-Pyrrolidone-2-carboxylate Ester by Reverse Phase High-Performance Liquid Chromatography *E. Bousquet, V. Guarcello, M. C. Morale, and V. Rizza* 135

A Rapid Method for Detecting Specific RNA Transcripts by Hybridization to DNA Probes in Solution
Francisco G. Nobrega, Carol L. Dieckmann, and Alexander Tzagoloff 141

New Assay for Uronosyl 5-Epimerases *Patrick Campbell, David S. Feingold, John W. Jensen, Anders Malmström, and Lennart Rodén* 146
A High-Performance Liquid Chromatography Method for the Assay of Cytidine Monophosphate–Sialic Acid Synthetase *Charles R. Petrie III and Walter Korytnyk* 153
Improved Recovery of Rat Liver Fractions Enriched in Lysosomes by Specific Alteration of the Sedimentation Properties of Mitochondria *Bernard Lardeux, Betty Gouhot, and Marguerite Forestier* 160
A Rapid Method for Analysis of the Products of *in Vitro* Translation of Messenger RNA *David S. Latchman and Martin J. Evans* 166
An Improved Method for the Determination of γ-Carboxyglutamic Acid in Proteins, Bone, and Urine *Manabu Kuwada and Kouichi Katayama* 173
A Kinetic Study on the Enzymatic Hydrolysis of Fluoresceindiacetate and Fluorescein-di-β-D-Galactopyranoside *Jürgen Hofmann and Manfred Sernetz* 180
Nucleoside Triphosphate Specificity of Firefly Luciferase *James D. Moyer and J. Frank Henderson* 187
Ultrasensitive Assay of RNA: Application to 100–500 Cells *James D. Moyer, J. Frank Henderson, and Richard von Tigerstrom* 190
A New Fluorometric Assay Method for Quinolinic Acid *Hiroshi Taguchi, Shiro Koyama, Yoshihide Shimabayashi, and Kazuo Iwai* 194
Measurement of Ferredoxin-Dependent Sulfite Reductase Activity in Crude Extracts from Leaves Using *O*-Acetyl-L-Serine Sulfhydrylase in a Coupled Assay System to Measure the Sulfide Formed *Christoph von Arb and Christian Brunold* 198
Detection of A + T-Rich DNA in Gels by Differential Fluorescence *Bradley C. Hyman and Thomas W. James* 205
Individual Quantitation of Vitamin D_2, Vitamin D_3, 25-Hydroxyvitamin D_2, and 25-Hydroxyvitamin D_3 in Human Milk *Bruce W. Hollis* 211
Rapid Precision Interferometry for the Analytical Ultracentrifuge. I. A Laser Controller Based on a Phase-Lock-Loop Circuit *Thomas M. Laue, Richard A. Domanik, and David A. Yphantis* 220
The Resolution of Bimodal Peaks in the Analytical Ultracentrifuge in the Presence and Absence of Ligands *V. Prakash and Serge N. Timasheff* 232
A Simple Quantitative Method for the Determination of 3-Fluorotyrosine Substitution in Proteins *Marilyn R. Kehry, M. Lisa Wilson, and Frederick W. Dahlquist* 236
The Estimation of Nitrate and Nitrite in Saliva and Urine *P. J. R. Phizackerley and S. A. Al-Dabbagh* 242
Simultaneous Determination of 3-Methoxy-4-hydroxyphenylglycol, 5-Hydroxyindoleacetic Acid, and Homovanillic Acid in Cerebrospinal Fluid with High-Performance Liquid Chromatography Using Electrochemical Detection *Mika Scheinin, Wen-Ho Chang, Kenneth L. Kirk, and Markku Linnoila* 246
A Direct Solubilization Procedure for the Determination of DNA and Protein in Cultured Fibroblast Monolayers *Thomas Sorger and Ralph J. Germinario* 254
Large-Scale Purification of Viroid RNA Using Cs_2SO_4 Gradient Centrifugation and High-Performance Liquid Chromatography *Metin Colpan, Jürgen Schumacher, Wolfgang Brüggemann, Heinz L. Sänger, and Detlev Riesner* 257
Determination of Levels of Glycolytic Intermediates and Nucleotides in Platelets by Pulse-Labeling with [^{32}P]Orthophosphate *Holm Holmsen, Carol A. Dangelmaier, and Jan-Willem N. Akkerman* 266
Radiometric Assays for Mammalian Epoxide Hydrolases and Glutathione *S*-Transferase *Sarjeet S. Gill, Kenji Ota, and Bruce D. Hammock* 273

NUMBER 2, JUNE 1983

Quantification of Coenzymes and Related Compounds from Methanogenic Bacteria by High-Performance Liquid Chromatography
Patrick Van Beelen, Wim J. Geerts, Arjan Pol, and Godfried D. Vogels 285
Protein Patterns Obtained from Support-Bound Gels by Combining the Images at Different Stages of Destaining
Jacques G. Bindels, Huub N. M. W. Nievelstein, and Herman J. Hoenders 291
High-Performance Gel-Permeation Chromatography of Polypeptides in a Volatile Solvent: Rapid Resolution and Molecular Weight Estimations of Proteins and Peptides on a Column of TSK-G3000-PW *Gary D. Swergold and Charles S. Rubin* 295
Preparation and Reactions of an Iodinated Imidoester Reagent with Actin and α-Actinin
Gary R. Bright and Brian S. Spooner 301
Analysis of Differences between Coomassie Blue Stain and Silver Stain Procedures in Polyacrylamide Gels: Conditions for the Detection of Calmodulin and Troponin C
Michael Schleicher and D. Martin Watterson 312
A Bioluminescent Assay for Glycogen Phosphorylase in Cultured Cells
Richard J. Hughes 318
Buffer Induced Modification of 6-Sulfated Disaccharide in Chondroitin Lyase Digestions
David P. Norby, Victor M. Goldberg, Roland W. Moskowitz, and Charles J. Malemud 324
Detection of Cellulase Activity in Polyacrylamide Gels Using Congo Red-Stained Agar Replicas *Pierre Béguin* 333
A Comparison of Fluorescamine and *o*-Phthaldialdehyde as Effective Blocking Reagents in Protein Sequence Analyses by the Beckman Sequencer
Ajit S. Bhown, Thomas W. Cornelius, John E. Volanakis, and J. Claude Bennett 337
A Spectrophotometric Assay for Dehydroascorbate Reductase
Robert L. Stahl, Leonard F. Liebes, Charles M. Farber, and Robert Silber 341
Noncompetitive Enzyme Immunoassay for the Measurement of Bronchial Inhibitor in Biological Fluids *J. M. Tournier, J. Jacquot, P. Sadoul, and J. G. Bieth* 345
Formation of [^{3}H,^{32}P]Phytic Acid in Germinating Wheat *Ernst Graf* 351
High-Performance Liquid Chromatography of Fatty Acid Isopropylidene Hydrazides and Its Application in Lipid Analysis
Vishwanath P. Agrawal and Erhard Schulte 356
Purification of Isoacceptor Transfer RNA by Affinity Coupling to Aldehyde-Containing Matrix *Qi-Song Wang and J. Tze-Fei Wong* 360
Hybridization of Nucleic Acids Directly in Agarose Gels
Smiley G. S. Tsao, Clifford F. Brunk, and Ronald E. Pearlman 365

Semi-micro Methods for Analysis of Labile Sulfide and of Labile Sulfide plus Sulfane Sulfur in Unusually Stable Iron–Sulfur Proteins *Helmut Beinert* 373
A Quantitative Method for Determination of 5,6-Dihydroxyindole-2-carboxylic Acid Using High-Pressure Liquid Chromatography with Fluorometric Detection *Christer Hansson* 379
A Practical Approach for Quantitating Specific mRNAs by Solution Hybridization *Diane M. Durnam and Richard D. Palmiter* 385
Measurement of DNA with an Automatic Spectrophotometer *T. C. Smeaton and R. D. Eichner* 394
A Rapid Two-Dimensional Fractionation of DNA Restriction Fragments *Carton W. Chen and Charles A. Thomas, Jr.* 397
Tetrazolium Method for Studying the Catalytic Properties of Oxidoreductases in Cellular Organelles Immobilized on Glass Surfaces *Anatole G. Belyakovich* 404
Simultaneous Determination of Linear and Branched Residues in Poly(ADP-Ribose) *Hector Juarez-Salinas, Hilda Mendoza-Alvarez, Viktorya Levi, Myron K. Jacobson, and Elaine L. Jacobson* 410
New Colored and Fluorescent Amine Substrates for Activated Fibrin Stabilizing Factor (Factor $XIII_a$) and for Transglutaminase *L. Lorand, K. N. Parameswaran, P. T. Velasco, L. K.-H Hsu, and G. E. Siefring, Jr.* 419
An Enzymatic Fluorometric Assay for L-Lysine in Plasma and Tissue *Jane M. Tiller and David L. Bloxam* 426
A Simple and Rapid Assay for Measuring Radiolabeled Ligand Binding to Purified Plasma Membranes *William M. Mackin, Chi-Kuang Huang, Barbara-Jean Bormann, and Elmer L. Becker* 430
Purification of Peanut (*Arachis hypogaea*) Agglutinin Isolectins by Chromatofocusing *Ronald L. Miller* 438
Purification of Brush Border Membrane by Thiocyanate Treatment *Ulrich Hopfer, Timothy D. Crowe, and Bernard Tandler* 447
Rapid, Quantitative Isolation of Mitochondria from Rat Liver Using Ficoll Gradients in Vertical Rotors *Douglas M. Stocco* 453
Determination of Hydroxylated Aromatic Compounds Produced via Superoxide-Dependent Formation of Hydroxyl Radicals by Liquid Chromatography/Electrochemistry *Donna M. Radzik, Daryl A. Roston, and Peter T. Kissinger* 458
Histone Fractionation by High-Performance Liquid Chromatography on Cyanoalkylsilane (CN) Reverse-Phase Columns *Lawrence R. Gurley, David A. Prentice, Joseph G. Valdez, and W. Dale Spall* 465
A Spectrophotometric, Enzymatic Assay for D-3-Hydroxybutyrate That Is Not Dependent on Hydrazine *Allison Brashear and George A. Cook* 475
The Precision of Results from Nonlinear Regression Analysis of Data following a Three-Parameter One-Exponential Equation *R. M. Dawson* 483
Monitoring of Carbohydrates with Periodate in Effluents from High-Pressure Liquid Chromatography Columns *Philip Nordin* 492
A Microassay System for Measuring Esterase Activity and Protein Concentration in Small Samples and in High-Pressure Liquid Chromatography Eluate Fractions *William G. Brogdon and Charlotte M. Dickinson* 499
Analysis of Protein–Glutathione Mixed Disulfides by High Performance Liquid Chromatography *Michael J. Meredith* 504
Sensitive Fluorographic Detection of ^3H and ^{14}C on Chromatograms Using Methyl Anthranilate as a Scintillant *Barry R. Bochner and Bruce N. Ames* 510

A Rapid and Sensitive Paper Electrophoresis Assay for the Detection of Microbial Siderophores Elicited in Solid-Plating Culture
Frank A. Fekete, Jack T. Spence, and Thomas Emery 516
Subpicogram Analysis of Sweat Proteins Using Two-Dimensional Polyacrylamide Gel Electrophoresis *Robert W. Rubin and Neal S. Penneys* 520
Bidirectional Measurement of Hydrogenase Activity by the pH-Stat Method
Raul Aguirre, E. Claude Hatchikian, and Pierre Monsan 525
Freeze-Drying and Analysis of Plant and Other Biological Material
C. van Sumere, H. Geiger, D. Bral, G. Fockenier, K. Vande Casteele, M. Martens, R. Hanselaer, and L. Gevaert 530
High-Performance Liquid Chromatography for Assaying NAD Glycohydrolase from *Neurospora crassa* Conidia
Piergiorgio Pietta, Mario Pace, and Faustino Menegus 533
Fluorometric Quantification of DNA in Cells and Tissue
Thomas R. Downs and William W. Wilfinger 538
AUTHOR INDEX FOR VOLUME 131 548

The Subject Index for Volume 131 will appear in the December 1983 issue as part of a cumulative index for the year 1983.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

[1] An extended Information for Authors was published in the July 15, 1982 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

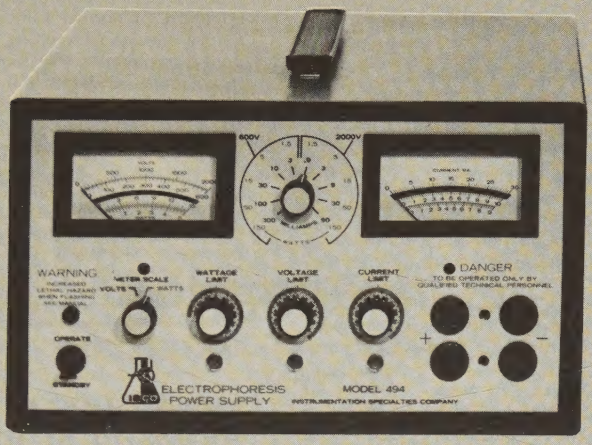
Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

Constant power. For gels that can't stand the heat.



ISCO's constant power can provide you with faster separations and sharper zones, especially for isoelectric focusing and high performance discontinuous buffer techniques. The Model 494 has an automatic crossover circuit that switches control to a different mode whenever a preset power, voltage, or current limit is reached. It also has a unique ground fault detector which often indicates faults before you turn the power up, because it monitors ground capacitance and resistance instead of leakage. A wattmeter continuously tells you the power output—there's no need to multiply current and voltage readings. And finally, you get 2000V but pay only $1495.

Find out how you can buy an ISCO third generation constant wattage power supply for less than someone else's first try, and get substantially better specifications too. Send for your ISCO catalog today, or phone toll free [**800**] **228-4250** (continental USA except Nebraska). ISCO, P.O. Box 5347, Lincoln, Nebraska 68505.

Instruments with a difference

For your laboratory—books that illustrate the effective use of animals in biomedical research...

THE NUDE MOUSE IN EXPERIMENTAL AND CLINICAL RESEARCH

EDITED BY JØRGEN FOGH and BEPPINO C. GIOVANELLA

VOLUME 1

"Contains expertly written and exhaustive reviews of the existing knowledge concerning the genetics, breeding and mass production, physiology, diseases and experimental use of nude mice. This timely and informative volume is warmly recommended."—ALLERGY AND IMMUNOLOGY

1978, 502 pp., $51.00 ISBN: 0-12-261860-2

VOLUME 2

CONTENTS: Spontaneous Virus Infections of Nude Mice. Spontaneous Tumors in Nude Mice. Oncogenic Viruses and the Nude Mouse. Effect of Caloric Restriction on the Growth of Human Tumors Heterotransplanted in Nude Mice. Long-Term Growth of Human Tumors in Nude Mice: Evaluation of Stability. Metastasis of Tumor Xenografts in the Nude Mouse. Cell Hybrids in the Nude Mouse. Nude Mice with Additional Immunodeficiencies. The Immune-Suppressed Mouse as an Alternative Host for Heterotransplantation. The Nude Rat. The Nude Mouse in Studies of Leprosy. The Nude Mouse in Immunoparasitology. The Nude Mouse in Diabetes Research. The Nude Mouse in the Biology and Pathology of Skin. The Nude Mouse in Autoimmunity. Allergy Research Using the Nude Mouse. Advances in Chemotherapy Studies with the Nude Mouse. Radiobiological Studies Using the Nude Mouse. Studies on the Hyperthermic Treatment of Human Tumors Heterotransplanted in Nude Mice. Effects of Interferon on Human Tumor Cell Growth in Nude Mice. Gynecological Oncology Studies in Nude Mice. Brain Tumor Research with Nude Mice. Pediatric Tumor Research with Nude Mice. Malignant Melanoma: Investigations in the Nude Mouse. Transplantation and Dissemination of Human Hematopoietic Malignant Cells in Nude and Lasat Mice. Index.

1982, 587 pp., $58.00 ISBN: 0-12-261862-9

METHODS OF ANIMAL EXPERIMENTATION

VOLUME 6

EDITED BY WILLIAM I. GAY

This authoritative treatise reviews the most efficient and practical ways to use laboratory animals in biomedical research. The volumes discuss the most commonly used methods in sufficient detail to be useful to either the active researcher or the advanced graduate student. Extensive references and bibliographies are also provided for those in need of further information.

CONTENTS: *E. L. Green*, Genetic Methods in Animal Experimentation. *R. L. Peiffer, Jr., J. R. Armstrong*, and *P. T. Johnson*, Animals in Ophthalmic Research: Concepts and Methodologies. *C. G. Lineberry*, Laboratory Animals in Pain Research. *J. E. Heavner*, Animal Models and Methods in Anesthesia Research. Index.

1981, 365 pp., $47.50 ISBN: 0-12-278006-X

CLINICAL BIOCHEMISTRY OF DOMESTIC ANIMALS

Third Edition

EDITED BY JIRO J. KANEKO

This third edition is a significant expansion of th scope of the subject over the earlier editions. A chapters have been extensively revised, and sever new chapters—Clinical Enzymology, Reproductive Ho mones—have been added in addition to an extensiv appendix of normal values in a variety of domesti animal species. In keeping with the efforts of the sc entific community, transition to the use of the Systèm International d'Unites (SI) has been instituted. Eac of the nineteen chapters treats the most significant a pects of a particular biochemical topic as a concept a well as comparatively between species. The majo chemical constituents of blood, including carbohy drates, proteins and fats, electrolytes, and metal ion are used to group the chapters and the clinical-bio chemical aspects of the organ function are also give treatment. The book will be especially useful as source of information to interpret biochemical change in the blood and body fluids in the context of fund mental changes in the body in response to disease

1980, 484 pp., $65.00 ISBN: 0-12-396350-8

THE MOUSE IN BIOMEDICAL RESEARCH

VOLUME 1: HISTORY, GENETICS, AND WILD MICE

EDITED BY HENRY L. FOSTER, J. DAVID SMALL, and JAMES G. FOX

CONTENTS: *H. C. Morse III*, The Laboratory Mouse—A Historical Perspective. *J. T. Marshall*, Taxonomy. *M. F. Lyon*, Nomenclature. *R. D. Sage*, Wild Mice. *E. Green*, Breeding Systems. *M. C. Green*, Gene Mapping. *J. Klein*, The Histocompatibility-2(H-2) Complex. *H. Hedrich*, Genetic Monitoring. *J. Staats*, Inbred and Segregating Inbred Strains. *L. Flaherty*, Congenic Strains. *D. W. Bailey*, Recombinant Inbred Strains and Bilineal Congenic Strains. *D. A. Miller* and *O. J. Miller*, Cytogenetics. *P. B. Selby*, Radiation Genetics. *D. W. Nebert*, Selected Aspects of Pharmacogenetics. *J. Klein*, Addendum: The Histocompatibility-2(H-2) Complex. Index.

1981, 320 pp., $54.00 ISBN: 0-12-262501-3
Subscription price: $45.00*

VOLUME 2: DISEASES

EDITED BY HENRY L. FOSTER, J. DAVID SMALL, and JAMES G. FOX

June 1982, 464 pp., $74.50 ISBN: 0-12-262502-1
Subscription price: $63.50*

*Subscription prices set for individual volumes are valid only on orders for the complete set received before the publication of the last volume. Subscription prices are not valid on orders from Australia or New Zealand.

Send payment with order and save postage and handling. *Prices are in U.S. dollars and are subject to change without notice.*
